STORIES

BY SPM ASSETS

Assess + Analyse + **Plan**

Collaboratively create a compelling asset management plan.

Collaboratively create and bring together your organisation's asset plans, and develop stronger documents that are more relevant to your asset management objectives.

Stories lets you create and bring together your organisation's asset plans in a collaborative way, and deliver an asset management plan that makes a difference. The Stories module is a collaboration space where you can share your asset management related information, such as plans, scenarios, policies, and reports. It's pre-populated with everything you need to get started quickly, and has built-in tools to facilitate communication and teamwork across your organisation. Digitally transform the way you manage your asset management documentation.

Overview

Stories is an additional module for SPM Assets. It's a collaboration tool devoted to the development of your plans, procedures and policy documents. A space where you can share, collect feedback and improve your asset management planning. It brings together key stakeholders and engages them in the asset management and capital planning process. You will receive notifications when something is being updated or commented on, and will know who to chase up.

Stories can be used with any other module and can be bundled in with our Advanced Reporting module.

Encourage buy-in

Stories provides a dedicated collaboration space where up to 50 users can either view or contribute to your asset plans or any other story you share. You will be able to assign and track users' actions, keeping up to date and ensuring you can work in an agile manner with your stakeholders.

This space will help you generate common, consistent understanding across your entire organisation. You could even use it to store your policies and procedures so everybody will have access to the most up to date versions.

## Top-down or bottom-up planning

Produce an asset management plan without having bottom-up component level data. Using our templates you can build a compelling asset management plan at any level of maturity and will have the option to be better aligned with ISO 55000.

Transform your asset planning process

There is now a more modern, agile approach to create your plans. The lengthy all-inclusive plans can be relegated to the past. Working with all stakeholders you'll be better positioned to deliver a targeted plan that's more likely to succeed.

Even if you are using a collaborative approach today, Stories' Timeline will make it easier to manage the actions the team needs to finalise and sign off your plans.

"Collaboration will give you the confidence that you have it covered."

Graphs and images

Build your story using data tables and graphs from SPM Assets seamlessly. Combine words with data, reports, images and commentary.

Technical requirements

Stories works with the latest two versions of Chrome, Edge, Firefox and Safari. Please note Stories requires a modern web browser and will not work with Internet Explorer.

If you select this module you might also want to consider:

- Project Planning: take the next step beyond reporting on the current state of your assets and provide an extra level of analysis including budgeting and developing a works programme.

- Advanced Reporting: enabling you to generate interactive, graphical and tabular reports with easy-to-use drag-and-drop functionality.

- PQS module: enables you to measure any type of qualitative standard such as functionality, accessibility, energy efficiency, or compliance with building codes, safety and security.

Key benefits

- **Engage and inform your key stakeholders with the dedicated collaboration space to share and collect their feedback. This helps everyone to understand what he or she needs to achieve.**

- **Quickly gather and share data from other SPM Assets modules with your colleagues to gain more insightful feedback.**

- **Reduce writing time, as you can quickly develop your story from the built-in templates.**

- **Your data is kept safe and secure within the protected environment of SPM Assets software.**

- **Become agile and share business insights to improve decision-making and produce better products and services.**

- **Fully functional and accessible on laptop and tablet devices.**
